

# SAP<sup>®</sup> BUSINESSOBJECTS<sup>™</sup> INTEGRATION FOR ESRI GIS SOFTWARE

Bidirectional integration between SAP BusinessObjects and ESRI ArcGIS Server, ArcIMS and ArcGIS Desktop

## SAP BusinessObjects Integration for ESRI GIS

### CUSTOMER FEEDBACK

"We were delighted to see how easy it was to implement the APOS Integration Kit for ESRI GIS, to seamlessly serve BusinessObjects XI reports back to the ArcIMS user based on selected map features. It took very little technical knowledge of ArcIMS to add the Crystal Report functionality to the standard ESRI html map template."

...Alex Bellak  
City of Troy

"APOS Solutions are saving us 150 hours per month. My overall experience with APOS Systems was outstanding!"

...Kent Yau  
Toyota

"We have saved time, which translates to money. The solutions assist in enhancing the productivity of our report developers, and more importantly, our Business Objects Administrators."

...Lynn Lagowski  
Southwest Airlines

THE SAP BUSINESSOBJECTS INTEGRATION FOR ESRI GIS bridges geographic information systems (GIS) applications from Environmental Systems Research Institute (ESRI) with business intelligence (BI) tools from SAP BusinessObjects, enabling a new form of 'location intelligence'.

This powerful bi-directional bridge between two industry-leading business intelligence solutions gives you the unmatched power to leverage spatial data with your reporting analytical capabilities using ESRI ArcIMS and SAP BusinessObjects XI implemented without extensive custom development. This bidirectional capability allows such innovative solutions as a 'side-by-side' presentation, where a map and a report are side by side in one view, with the ability to click on the report to refresh the map, or click on the map to refresh the report.

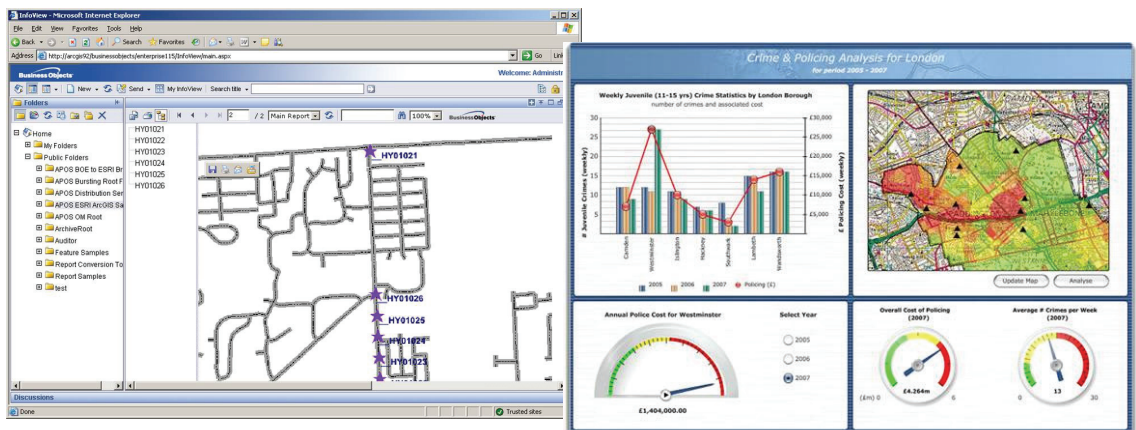

### Key Features

#### Bridge to SAP BusinessObjects XI from ESRI ArcGIS Server, ESRI ArcIMS, or ESRI ArcMap

- Expose the full power of SAP BusinessObjects XI to an ESRI GIS user
- Request Crystal Report, Web Intelligence, Desktop Intelligence, or Xcelsius SWF while passing user feature selection to the report. Users can select from multiple reports, viewer and format options.
- View any PDF, XLS, DOC, RTF, or a Text file stored in the system
- Bridge to ESRI ArcGIS Server or ESRI ArcIMS from SAP BusinessObjects XI
- Dynamically embed images from ArcGIS Server or ArcIMS in a report, include report or map data in an acetate layer on the dynamically generated map
- Create report hyperlink to load ESRI GIS HTML viewer with report data as highlighted features, for ArcGIS 9.2 include report or map data in an acetate layer
- Crystal Reports, Web Intelligence, Desktop Intelligence, or Xcelsius SWF supported
- Integrate ESRI GIS into reports, office documents, dashboards or portals

## MAXIMIZE SAP BUSINESSOBJECTS SOFTWARE WITH APOS SOLUTIONS

### CUSTOMER FEEDBACK

"Implementation was a piece of cake and very straightforward. There were no disruptions to our business processes with the implementation and it solved the business issues we were trying to solve. Reputation and affordability were two big reasons for choosing APOS Systems."

...Brendan Bell  
Columbia Gas  
Transmission

"The best support experience of my career."

...Annie Damiano  
USDA

"APOS is a one stop shop with quality products at the right price. They have products that actually fit the changing needs of their customers and they continue to produce essential products."

...Lance Sisemore

APOS SOLUTIONS for SAP BusinessObjects XI provide customers with powerful solutions to extend their business intelligence system. The APOS Solutions are efficiency-enabling technologies which bring enhanced management, monitoring, and integration to your SAP BusinessObjects deployment. The net result for your business intelligence system is increased control and scalability, and decreased total cost of ownership. As well, APOS development services often use APOS Solutions as the foundation to fast-track custom development projects. View our customer case studies and customer comments, available on our web site [www.apos.com](http://www.apos.com).

### Powerful solutions for enterprise architects and administrators to manage and extend SAP BusinessObjects

Exceptional requirements require exceptional solutions. APOS Solutions are award-winning, robust solutions that address SAP BusinessObjects customer requirements.

Most APOS Solutions are **full-client solutions**, enabling customers to perform system administration and management actions on much larger groups of objects, rather than with a web-based approach that is restricted to actions with one object at a time or in much smaller groups. This is one reason APOS Solutions appeal to power users and administrators. Examples include Instance Manager, InfoScheduler, and Object Manager.

APOS Solutions **extend specific functionality** within XI, to deal more aggressively with specific customer needs. Examples include Bursting Manager, Distribution Server, KPI, Instance Monitor, and Report Package Booster.

APOS Solutions **deliver additional functionality** to the XI platform itself. Examples include AddressBook Gateway, Archive Manager, InfoScheduler, RealTime Monitor, and RunTime Manager.

APOS Solutions **focus on platform integration**, bridging the gap from XI to other environments, delivering integration solutions not available with the XI platform itself. Examples include our Integration Kits for ESRI GIS and for Microsoft Outlook.

### About Localyse

Localyse is a Location Intelligence solution and service provider that combines the strength of Business Intelligence and spatial analysis to improve their customers' performance and decision-making process. As part of the Belgian Cronos Group NV, Localyse has the availability to work closely with over 1500 highly qualified and experienced ICT consultants.
